WELL DEVELOPED

Here at Sharing Minds, you can rest assured that you are getting a vast wealth of knowledge, decades of experience, capability and expertise from our many Senior Consultants and Specialist Development team.

It is our world class knowledge base in which we pride ourself in offering the highest level of consultation and service outcome to any client and project.

When working with Sharing Minds, your organisation accesses this entire suite of skills and experience, ensuring your project is delivered brilliantly.

KEEP MOVING FORWARD

The development practice has evolved from years of delivering custom solutions. Today we are building to your modern online experience through a range of MS365 and Azure backed resources including:

- *Power Automate, Flows and Logic Apps*
- *MS365 and Teams Webpart Development*
- *Full Swaggered API Microservices*
- *Custom Connectors with Azure AD Security Integration*
- *On-premise to cloud data and systems migration*
- *Azure Platform Architecture*
- *Azure Solution Design & Delivery*
- *Microsoft Cognitive Services*
- *Enterprise Search*
- *Azure Solution Mentoring*

WORKING IN AZURE DEVOPS

Sharing Minds Development Practice works entirely out of Azure DevOps for code storage, sprint management and continuous build and deployment of all custom solutions.

We have the capability of delivering on a scheduled release cycle or via continuous deployment utilising a full unit and integration testing.

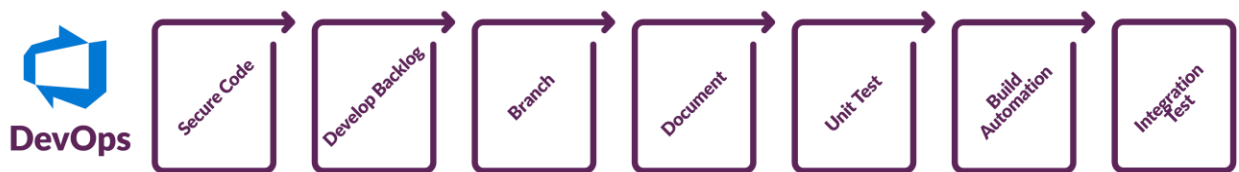

APPLYING AGILE PROJECT MANAGEMENT THROUGH AZURE DEVOPS

Our development practice has evolved from years of delivering SharePoint On-premise Solutions. Today we are building to your Modern Online experience through a range of Microsoft Development Practice working in Azure DevOps

All projects are delivered with the appropriate user and developer level documentation and are underpinned by a project\change manager. Sharing Minds code leverages both unit testing and integration as part of its continuous build and pipeline release process to ensure code is automatically checked, verified, and published, so that new capabilities appear seamlessly in your apps

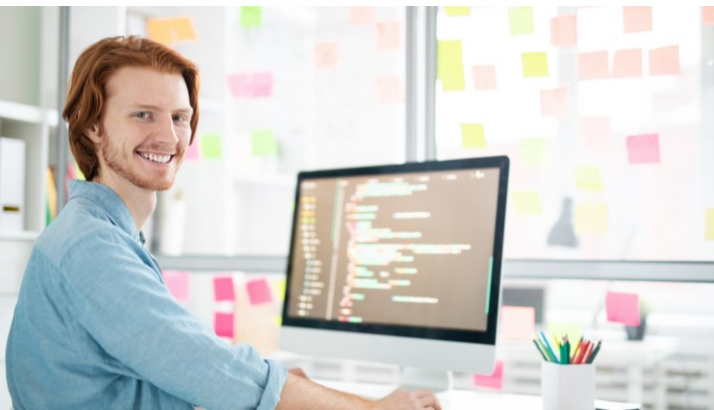

Our DevOps step from securing cod to production release

- **Secure Code** - Ensure all code is check into a secure repository with full version control
- **Develop Backlog** - A Backlog of project tasks is developed and assign to sprints to complete delivery
- **Branch** - Every User store has a unique branch and is code reviewed before merging
- **Document** - Developers are encouraged to document every step of their discoveries and code
- **Unit Test** - Unit test work to validate the logic of code and ensure previous versions still work
- **Build Automation** - Environment, Code Builds and deployment are all automated
- **Integration Test** - Integration tests check features against production hardware with expected data
- **Release** - Automatic or gated software release if all tests are ensured

PROJECT MANAGEMENT AND DESIGN

Sharing Minds Development practice is happy to include customers in the project life cycle to ensure that we are delivering to the customers' expectations. We generally run in fortnightly sprints with a customer showcase on the day prior to a sprint kick off. Feedback from the showcase allows us to ensure the next sprint is targeted to the customer needs.
